

CREATIVE WAYS ON HOW TO MAKE MATH FUN AND EASY TO STUDENTS

by:
Maureen S. Cayabyab

Math is a tool, not an end. It is one of the 3 “R’s” of education that is learnt not for its own sake but as a tool with which to study the world. Just as we learn to read to gain information, and to write in order to be able to communicate with others; similarly math is simply a tool to represent and manipulate entities and phenomena like quantity, structure, space and change. Sarita Parikh (2007). If Math is easy and fun why do many of the students tend to struggled with studying Mathematics and some said it is one of the hardest subjects. But, teachers made it possible to have fun and bring positivity while doing the Math. Here are some of the creative ways on how to make Math fun and easy to students; Math games, are a tried-and-true method for bringing excitement and competition to the classroom. Using modern technology to engage students in the world around them. A hands-on approach in the math classroom means finding real-life examples of formulas and concepts, or including student interests in relevant work problems. And, application of Math to real life situation, making math relatable could be done by applying things such as storytelling to help them associate concepts with things they understand. Mathematics won’t be hard if we want to learn it; Determination will make us feel at ease for everything, if we wanted something we will sure to have and learn it.
