EDUCATION IN DIGITAL AGE

by:
Aileen C. Olivera
Mariveles National High School - Sisiman

Findings from a K-12 Schoology survey titled The State of Digital Learning show that an enormous majority of teachers and administrators accede that digital learning certainly impacts student growth and attainment. Figurehead in the world of education must be pleasant with and have a well-built grasp of how to integrate digital learning. Nowadays, learning is such an opportunity and a privilege as well. Digital learning is a time saver of our educators, it increases the efficacy of learning experiences. It also allows the individual students for personalization based on their needs. It has a great impact in the student's growth and achievements. It helps them to emphasize such lessons to study by themselves or by the guide of their parents and facilitators. In implementing the digital learning is not without its challenges. The most important of all is the access to necessary technology. Most of the students do not have their own digital devices or consistent access to internet. School districts and divisions may need to create partnerships with internet providers or device manufacturers to ensure that all students have the technology tools they need for them to learn and study.

Good impacts of this digital learning; helps the students to participate actively in their class during the discussion if they have a reference about the topic being talk about. Easy access to the internet and different form of social media regarding to their lessons. It also saves time for browsing a certain information about the given topic. On the other side, the facilitators and teachers gives a reliable sources and references about the lesson being talk about. It enables them to elaborate more the information and facts they are going to teach and to share with the students and learners.

On the other hand, it can have also a negative impact to those who abuses the digital learning. It can be a way of giving a wrong concept of using the internet and social media. It can also destroys their mindset if abusive and uncontrollable used for their learning and different aspects of life. However, it gives more good benefits for our young generation and future educators also. Be a responsible social media user when learning is applied. Have a limitation when gathering such information to different website. For the digital learners should have a critical thinking in the data and information they gathered in the internet. They should be prudence in sharing the facts and not the fake ones.

In conclusion, digitizing the learning quite challenging and exciting at the same time because it gives an opportunity to explore in different aspects of learning. It can also manage and motivate us to improve ourselves in the further future we are looking forward.
