The pandemic established a new normal. It has altered a great deal. Education was also altered by the new normal. There was an explosion of new learning and teaching methods to deal with the changes brought about by the pandemic.

Today, online education is widely used throughout the world. Online classes are critical for students to learn during a pandemic. It has served as a substitute for students and educators alike since there were restrictions prohibiting everyone from attending school.

While online education is extremely beneficial for everyone, it also has consequences for both teachers and students. We must be aware of both positive and negative consequences.

To begin, online education is effective, especially in today's world, where there are no face-to-face classes. Things are easily accessible in an online class. Lessons previously published in print books can now be converted to online resources. These resources are easily shared, which simplifies the process of distributing educational materials to students.

Another reason is that online education is very accessible. It will be easier to reach students regardless of where you are or what time it is. The majority of online classes are recordable and shareable for future reference. It will be easier to reach students and teachers regardless of how far apart they are.

Online education can also help you save money. Attending classes online eliminates the need for transportation and meals. Additionally, online learning enables students and teachers to perform tasks without the use of paper.

Additionally, because online classes are merely virtual classrooms, they enable students to attend classes at any time and from any location. Additionally, online classes provide students with the opportunity to discover their most effective learning styles.

If there are beneficial effects, there are also detrimental effects. Online education requires students to spend more time in front of a screen than they would normally. And because everyone is constantly glued to their screens, they are unable to focus on tasks and are easily distracted by what's on the internet.

While we are taking online classes, not everyone has the financial means to attend. And even when some have the luxury of online learning, the majority of us still encounter internet problems that disrupt the students' learning.

Additionally, online education creates a sense of isolation for students. There is little to no interaction and contact with peers. With the interaction of students and teachers, online learning creates an additional barrier.

Additionally, some students and teachers lack the resources necessary to participate in online classes. Additionally, because this is a novel concept, some teachers and students are unfamiliar with using online resources.

Online education entails increased screen time. It is one of the most significant and perplexing effects of online education. The majority of students develop poor posture and other physical issues.

It has proven to be an effective method for educators, but we must exercise caution and use it responsibly. Online education provides students with the opportunity to grow even during pandemics.
