

TECHNOLOGY AND ITS VARIOUS FACETS

By:

Rhodalyn S. Aguilar

Master Teacher I, Duale Elementary School

Technology has always thrived to benefit humankind. Technological accomplishments have left people spell-bound, providing every part of the world with utmost comfort. All the countries are now interlinked which led to a massive global village. Medicine, workforce, education, and industry have greatly improved through modern technology. Still, we cannot say that technology is blameless. A two-edged sword that needs to be handled with profound understanding to see its extent, and to maximize its benefits, without solely relying on it. Depending on the way the users utilize it, its effects are boundless.

Presently, one of the most used advancements is technological devices. Generally speaking, all smartphones and computers belong to technological devices, also known as electronic gadgets. There's no denying that these had become a significant part of our lives, especially for the younger generation. Undeniably, technological devices made a huge impact on students' learning.

As these electronic gadgets become a natural part of their lives, it is safe to say that it is both an ally and an enemy. Indeed, it has made learning more enjoyable and exciting for students. From mind-numbing lessons, it can easily be turned into thought-provoking activities. Indeed, students' eagerness is boosted, and they strive more to further understand the discussion.

Additionally, electronic gadgets like computers, alongside the internet, make the lives of students easier. They can make use of computers to come up with presentations and also make use of the internet to carry out research on a variety of topics for their essays.

However, if not properly monitored, these devices can be very addictive. In the past, children and teens filled up their free time by reading books, socializing, or engaging in active and creative play; fixating on electronic gadgets decreases participation in all these. They immerse themselves in their digital world since it can be as endless as they want it to be. They eventually become dependent on such that they tend to drift away from the actual world they live in.

Electronic gadgets had been and are continuing to be, a stepping-stone for students. These guaranteed students of ample technological skills they need whether in their workplace or business endeavors. This will eventually lead to a more competitive individual as compared to those who do not have access to a certain software or technology in school. The continuing advances of the technological world continuously open opportunities to students.

Technology has proven its effectiveness in every aspect of people's lives—it is everywhere. Its influence on education is inevitable and undeniable. It is just a matter of supervising the use of electronic gadgets that will determine if these technological advances will be our ally or enemy.
