

## THE NEED FOR TEACHERS TO ADOPT IN THE MODERN WORLD

*by:*

**Sharon C. Diesta**

*Teacher II, Alangan Elementary School*

In a world surrounded by computers, gadgets and modern tools, learners will be inspired to learn about the process and knowledge in education if they will be using related techniques and if they will be manipulating materials and tools with modern techniques. Using modern technology in the instructional room will enable both the learners and teachers to find new concepts, ideas and conclusion in solving daily life problems. Technology in teaching will help a lot to improve a better educational setting and will encourage the learners to regularly attend their classes.

If the teacher will apply modern techniques in his day to day classroom activities, it will enhance not only the process of teaching but also the rapport between the teacher and the learners. Teachers will also grow as professional educators, curriculum and content expert and mentor. Modern technology will help make the transfer of learning more fun, meaningful and enjoyable.

The impact that the technology has in schools today is the transformation of how pupils/learners learn it makes learning easier and effective.
