

## KEY COMPONENTS OF QUALITY EDUCATION

*by:*  
**Princess M. Oabina**

Nowadays, the slogan "quality above quantity" is frequently heard, especially in the education sector. To become competitive in the global marketplace, individuals must enhance the skills and knowledge they acquire in school.

In any country, the education system is the primary driver of economic expansion. Because education is so important to the development of every nation, that it was mostly untouchable for many decades or even centuries. The educational path was mapped out according to the requirements of the national school system. The world of the future will benefit from the contributions of today's children. Importantly, education is available to almost every child in the world today, regardless of the place in which they live, the religion they practice, or the social status they hold.

Individuals are allowed to cultivate their intrinsic qualities, become more productive in their vocations, and acquire extra information and skills when they receive an education of high quality. Students can improve their skills and apply them to problems that they will face in the real world while they are still in school if the quality of education is improved. They will become more substantial contributors to the problems that are facing the world today because of their participation.

As with everything else, key factors determine the quality of education. The primary components are:

The Teacher and Teaching Methods. There are several ways for a teacher to invest in his course and optimize its potential. Engagement reflects a teacher's eagerness to learn new approaches and use innovative tools.

Educational Content. Information quality, not quantity, should be emphasized. This inspires students to learn. Quantity can be important, but it depends on the course. Let's choose the better product if we must.

Learning Environment. Learning environments vary as education progresses. Now that pupils may choose their learning approach, they're more engaged.

Precondition of Learners. Each student has a unique history, family, and academic problems. A quality education considers all these elements that can inhibit learning.

Indeed, long gone are the days when grades served as the most important indication. At this point, education entails not only the acquisition of knowledge but also its application to satisfy the ever-increasing demand for development, research, and improvement.
