

## SIGNIFICANCE OF EDUCATION

by:

**Mark Joseph S. Francisco**

*Lamao National High School, Teacher I*

Nelson Mandela said, "Education is the most important armament to change the world." It is an armament that can no way be stolen by anyone. Being educated is one of the most essential effects in order to survive and people need education to be suitable to manage up with the advancements in this competitive world.

Literacy is a lifelong process and it's relative to education. There are numerous circumstances that may challenge seminaries and institutions from around the world to apply quality education. One of it being endured at the moment, which is the COVID- 19 Epidemic. As far as schoolteacher education is concerned, descriptions of how institutions and stakeholders acclimated to the new script created by COVID- 19 epidemic. (Bao 2020; Flores and Gago 2020; Quezada, Talbot, and Quezada- Parker 2020; Zhang et.al. 2020) as well as training strategies and gests of invention (Ferdig et.al. 2020) have been reported.

The COVID- 19 epidemic has created the largest dislocation of education systems in mortal history, affecting nearly 1.6 billion learners in further than 200 countries. Closures of seminaries, institutions and other literacy spaces have impacted further than 94 of the world's pupil population. This has brought far- reaching changes in all aspects of our lives. Social distancing and restrictive movement programs have significantly disturbed traditional educational practices. Continuing of seminaries after relaxation of restriction is another challenge with numerous new standard operating procedures put in place (Pokhrel & Chhetri, 2021).

Although colorful studies have been conducted, the study on the impact of the COVID- 19 epidemic on tutoring and literacy across the globe concludes that, in the case of developing countries, applicable pedagogy and platforms for different class situations

of advanced secondary, middle, and primary education need to be explored further. The COVID- 19 epidemic has shown us that preceptors and learners should be educated on how to use colorful online educational technologies. When normal courses renew following the COVID- 19 epidemic, preceptors and scholars should be encouraged to continue using online technologies to ameliorate tutoring and literacy.
