

TEACHERS AND RESEARCH

by:

Mary Grace B. Domingo

Teacher III, New San Jose Elementary School

Research is an essential part of the teachers' competence and additional skills to be unlocked. It is with great motivation that teachers are pushed to do their own research and be part of their innovation team, achieve more action research as well as deliver quality teaching and learning through research-based projects.

Teachers are given more time, webinars, and introductory seminars on research and this have been successful.

Now the challenge comes after the webinars and the introduction of the teachers to research since they need to love research and find ways on how they can be of more service to their school as this may increase their passion for reading as well as writing essentials which may lead to discoveries of new learning through the lens of research. Now how do they make more teachers love research, science research is a tedious and serious matter?

Research can be identified as one of the most frightening words among educators and since this has become one of the "serious and fun matters" to discuss, it is with great privilege to discuss some important things about research and teachers.

Teachers are intelligent professionals and love to dwell on this kind of endeavor, but it must be lent with more time and more understanding. Give it a moment and it will grow passionately in one's heart.

Developing research-based skills are essential in the 21st-century skills and learning, so the webinars must be seemed appropriate for the student's needs and how

they cater such research-based knowledge inside the classroom, it may add on as the realization of the teachers will tell that they need to give more focus on research.

Motivating the teachers to read and write is of different thing since they have multiple things to do, so take one step at a time and choose what particular interest sparks their creativity and start there.

Hoping that these suggestions indeed add more to the development and passion for the teachers to love research as soon as possible.
