

HOW CAN YOU MAKE A STUDENT OF TODAY A BETTER FOR TOMORROW?

by:

Karen M. Caole

Teacher III, Kataasan Elementary School

The new K12 Curriculum required all Filipino students to have one year of kindergarten, six year of elementary schooling, four years of junior high school and two years of senior high school with their prepared track. This program is intended to further widen the student's knowledge and intellectually, to enhance their skills and to prepare them in a corporate world. With this improvement, a student of today can be better for tomorrow. It is expected by this change in the education system the student of today will have a good quality of education and possible employments for their tomorrow future. The students of today will improve the maturity, through experiences that let them grow and learn which they can use in finding jobs. This also a factor that most employer is looking for when hiring aside from the university they come from. The students of today is a product of K12, a new change in our education system. A student of today is also a product of the teacher's that adopts the new system of education. The system of education today is improving; we are making and preparing the students for their path towards their future. By the year 2018, a new batch coming from K12 curriculum will compete to the other country not only for work but to bring honor to our country. The student of today is the students who make their choices that fit their skill, and this will help them in finding a job that has a big demand. The different track offered in the senior high school will help them to decide the paths that make them who they are in the coming year. The department of Education builds the students today with the implementation of K12 to make them a better person for tomorrow future.
