

LEARNING IS A CONTINUOUS PROCESS

by:

Elna T. Valencia

Teacher I, Panilao Elementary School

Covid – 19 embraces the humanity in just a snap of a fingertip. Mostly, education sector collaboratively planned how to continue learning in the middle of the lockdown. Different platforms rise to ensure that all students will continuously be provided of what they need to learn.

While majority believed that the unplanned strategies and techniques especially when there were no trainings and insufficient online gadgets to use, will result to a poor education. But there are also believers that this pandemic won't be a hindrance to what education every student will have.

Although there are some points showing that is very hard to adapt into an e-learning system, the eagerness to continue learning was given focus and attention not only by the superiors but also the teachers and students as well.

Through distant learnings, introductions to reading, writing and mathematics were carefully handled with the collaborative effort of parents and teachers.

Pandemic did not stop learning. One way or another, it did not succeed forcing the student to stop gaining knowledge and skills. No matter how worst this deadly virus is, still education always find place in every student hearts and mind.

As teachers, we are very grateful to all the parents whose effort and willingness for their children to learn was not affected by the coronavirus spread out. Although they were shocked by the twist in the education system, that is switching the curriculum into

a more compressed learning competencies, still, they gave their best to make every child a learner regardless of the worsening health situation globally.

It is, therefore, very evident that education is the first and foremost important factor which make the country go around regardless of everything, it matters most. It must continue every now and then to ensure that the best knowledge is being catered even in the middle of this deadly outbreak. It must be continued in any way it should be.

There is a need to a teacher to prepare lessons creatively to keep every student engaged in learning and focused on how to answer modules even without the explanations. They are also expected to provide some resources for the students to be able to understand fully all they need to understand in all the lessons.

To adapt to these changes, just keep oneself believing that nothing can stop learning even in the middle of this pandemic. Using all the techniques and strategies which can be utilized during the hard times, still, teaching-learning process can still be maintained and processed.
