

PANDEMIC: RE-SHAPING PHILIPPINES EDUCATION SYSTEM

by:

Raquel I. Riñon

Teacher II, Pantalan Luma Elementary School

Distance learning is a major challenge for many Filipino students. Purchasing a laptop, a smartphone or even a tablet or a cell phone plus providing an internet access was not something all Filipino parents can easily do for their children, no matter how much they want to do. Many have lost their livelihood opportunities as a result of the pandemic.

The education system acknowledges this. So, they use this chance to adapt the way we educate our children. The pandemic is far from over and who knows what other challenges we might still face, so while it's a complicated process, this is a way for the Philippines to establish the educational institutions of the future.
