

VERSION 4.0

by:

Ma. Jhoana D. Bulos

Teacher III, Samal National High School - Main

Change is an inevitable thing and is said to be the only constant thing in this life. With these concepts, new thinking which resulted to new technologies and innovation enables industrial revolutions to happen. This time, where everything seems to be in fast phase and a world with more upgrading technologies, adaptability skill is indeed significant for all aspects of life.

Industrial Revolution doesn't only affect the industry per se, it also plays a significant role in the community, society and the way people live. These changes which primarily due to the revolution affects different aspects of life and, so as the education sector. In this era of the Fourth Industrial Revolution where rapid changes in the production and consequently labor markets is evident, Education sector should act accordingly and be responsive to it. The promises of the 4th industrial revolution could be unlocked if education sector will take actions which can meet the new trends, needs and interest arising in this time. With this, education sector is one of the important sectors which shoulder the responsibility to enable this country to cope, adapt and be in line with the requirement of the industry.

This time asks for the concepts of flexibility and modularity in order to cater the changing needs, accommodate diverse talents of the learners, passions and interests of students as well as the society. The sector should act upon the perspective that the goal of the system is to produce learners that can work alongside machines rather than compete with them. This is the basic idea that will enable this generation to cope with the new trends that this revolution brought into play.

Hence, unlocking the promises of the 4th Industrial Revolution especially in education is to empower its people through enhancing right skills that is in line with the needs of this revolution and to develop a growth mindset for its people.
