Dennesse Anne M. Martinez

Teacher III, Morong National High School

This pandemic slows down all movements on the earth's surface which resulted in unimaginable upshots as if we were all doomed right at the onset. And the country's education system was not spared. Schools turn into ghost towns with empty classrooms and dried leaves scattered from not well-tended gardens. For two years now, the Philippine educational system still seems on a trial-and-error process, trying to impose interventions from time to time hoping to address surfacing concerns amid distance learning.

There are various types of distance learning. It can be digitally combined with printed or printed modular learning, online learning, or blended learning. Any of these always raise questions. As a result of delays in printing and delivery, several regions of the country are lacking in the modules that are considered the foundation of distant learning. Teachers had to print the modules themselves as a result in order to fulfill delivery dates. On the other hand, because of the country's hardware and internet problems, online learning cannot be completely utilized. The majority of pupils lack the devices and internet connection necessary to participate in online platforms.

Classes that were once crowded with bright, eager students are now deserted. Sometimes, with the sight of facemasks, which is a symbol of the reason why pupils abruptly left schools, to always be safe with the help of their home learning facilitators, students are now aiming to learn as much as they can while relaxing in the comfort of their own homes. Everyone hopes that this sight of the new normal education will soon come to an end.
