

## TEACHER AND TECHNOLOGY

*by:*

**Maria Aiza A. Dela Cruz**

*Teacher III, Alikabok Elementary School*

Teachers are considered the pillars in the educative process. They have the abilities to influence and change the lives of learners in better ways. At present, the greatness of a teacher is being combined with the power of technology.

A teacher is the active agent in the classroom. On the other hand, technology could be considered as a tool in aiding the teacher to create a more dynamic discussion with the learners.

A teacher prepares the lessons before the actual discussion in the class in order to provide quality instructions for the benefit of the learners. On the other side, technology could be the means for the teacher to search for more interesting learning materials that will stimulate the interests of learners.

A teacher produces educational devices to aid the learners in understanding the lessons better. Technology could be a big help since there are numerous learning devices that may be searched from the Internet.

A teacher is fond of telling stories in order to inspire the learners in their lives. Technology may assist the teachers in providing movies and videos that are educational and at the same time inspiring.

A teacher loves to introduce games to learners for them to enjoy and find interest in learning. Technology can provide educational games for the teacher to utilize in teaching.

A teacher is responsible in practicing the skills of learners. Technology may be used by teachers in giving digital drills and exercises.

A teacher is very organized in recording the scores and grades of learners. Technology could have an improved record keeping and could provide a systematic means to analyze the academic achievements of learners.

A teacher is completely performing various related tasks in school. Technology could relieve the teacher in burden and difficulties in work.

Teachers should learn to utilize the advantages of technology for they bring multiple benefits to teachers, to learners and to education.

Indeed, teacher and technology complement each other.
