

COMPETENCY-BASED LEARNING FOR THE PREVIOUS ONLINE AND UPCOMING FACE-TO-FACE

by:

Lorna C. Dawat

Teacher I, J.C. Payumo Jr. Memorial High School

What is the competency-based learning? It is focused on mastery among students. The development of the students' minds is always dependent on the competencies checked by the teacher. In here, the students are allowed to demonstrate what they had actually acquired. The demonstration is always based on what the students might get from their teachers' rubrics on the lessons.

The competency-based learning has the same purpose with the outcomes-based learning, such that the learning is measured through the outcome demonstrated by the students. With this what happened during pandemic with this type of competency-based learning? Were there any challenges?

How about now amidst the upcoming F2F? Were there any modifications and enhancements?

What are the tips to become smooth in terms of the competency-based learning?

1. Try to give the skills to be measured prior to the giving of the lessons to be mastered.
2. Deliver more skills in terms of the measurable skills which can be highlighted as part of the skills mastered
3. Be consistent in checking and be smart in identifying rubrics
4. Always commend the students whenever they achieve the skills
5. When in doubt, stick to the standards

The mastery of the skills among the students will always be dependent on the patience, determination and love as well as passion of the teachers. The development of the students' minds will always be dependent on how they might also see their skills as relative to their current status hence the teacher might focus on the following:

1. Explain the skills as to how this might affect the students' learning
2. Discuss with the students the value of lifelong learning
3. Highlight the most important value of skills first
