

HOW TO CULTIVATE STUDENTS CREATIVITY AND HELP THEM DISCOVER THEIR FULL POTENTIAL AND UNIQUE ABILITIES

by:

Rochelle Z. Domingo

Teacher I, Kanawan Integrated School

The teacher has a big influence on every student's learning experience. There was a so-called standard teaching practices that educators are following, however, every teacher have their own unique styles on how to cultivate a students mind for a creative thinking and how to help students to discover their full potential. Here are some recommended teaching strategies that will help students for their creative thinking and to discover their unique abilities and full potential.1. Teacher must believe and trust that every students have their own capabilities. Every person is a unique individual which means every one has their own unique ideas. An idea is a product of one's creative thinking and therefore essential for a student that someone believes on them.2. Incorporate real or practical situations on the lesson plans related to the topic of the subject matter. You may ask your students to group them together according to number or alphabetical groupings and you may give them a real-life problem situation. Each group will need to present their ideas on how are they going to solve the problems and what are the strategies that they will use in order to solve and prevent the problems. The teacher will help the students to understand how his or her students will do their problem assessment skills and their decision skills. The teacher may enhance their creative thinking by giving more examples of a real-life situation related to the subject matter.3. Develop out of the box thinking. Encourage students to always be a solution oriented not problem oriented. If the students will be molded to the type of individual who always finds solutions, then the next generation will be a generation of solution-oriented individuals. Every problem has solutions and the ability of one person to solve a problem can be learned and enhanced over time but educators will play a big part to students life

by empowering them and molding their ways of thinking at their early age. 4. Discipline and core values in all aspects. Discipline will always be on the top of everyone's success. And the inner core values will always play a big factor in a student's life. If the students will be molded with discipline with the right values the students will carry these aspects in every way of their life and it will help them to be successful in the future.

Those are just some ways that I will recommend in order for a student to become creative and to discover their potential and unique ability.
