

THE NEW GENERATIONS, THE TOOLS AND THE LIKES

by:

Christopher S. Ereno

Teacher I, Jose C. Payumo Jr. Memorial High School

With all the current educational tools use in the development of the classroom learning and teaching, teachers are asking what tools must be necessary to sustain and supplement active teaching.

One avenue which could actually be done with this is the knowledge on the current generation of the students complemented with the current tools for them.

Ever wondered why these is very much essential?

It is accepted that each generation, the educational tools must be complemented, such that the tools and strategies to be used depends on the type and current generation the education has for the moment. This type of strategy will be dependent on the interest, motivation, attention span as well as how the strategies might complement the internet and the current advancement in the technology for the season or for the current academic year.

The generation the teacher has as of the moment plays with the Generation Z and Generation Alpha and with this, the development of the students' KSA or the knowledge, skills and attitudes will be mostly dependent on this.

What are the things which might be used for this kind of set up?

The advent of the online educational tools as well as the technological-infused strategies might offer not just quality learning but also opportunities not just for teacher but also for students and their guardians.

The skills needed in the current set up of teaching and learning to reach the lesson objectives everyday is more than just reaching the quality of instructions, it is dependent on how the platforms of learning and teaching be used as time passes by and how this may give more than just learning but lifelong learning to the students, since in the usage of the technology many skills may arise, one which might be needed for them to get a job in the future.

The soft skills must be complemented also with the technological presence of the students. The teachers might use the different strategies which is indeed needed in the current set up.

These are the list of the skills needed in the current educational set up with the current generation:

Technological Skills. This includes the usage of new technology with the ability to connect in the Internet.

Soft Skills. This includes the decision making, problem solving, stress management and the likes.

Leadership Skills. This includes the ability to manage people and other resources in the classroom or environment.
