*Teacher III, Old San Jose Elementary School*

There's no uncertainty that the cost of education is an upsurge. Especially nowadays, we are in the turmoil of the ever-changing world that cause rapid change not only to society but also in education because of this COVID-19 pandemic.

No matter where you come from or how you perceive the world, one of the profits of obtaining an education will be that it will lead your mind to new outlooks especially since the world and nature are challenging us on how we will be surpassing this pandemic at the same time teaching our learner to learn in their safest mode.

As we always practice that Education is for all, Learners continued with their studies despite economic and physical impediments carried about by the pandemic. Many Filipinos have been affected by the downturn of the economy because of the parents who lost their jobs and therefore cannot fund the studies of their children, especially now that gadgets and internet connection are become necessary to learn to meet the online class which required by the education department for the safety of our children while still learning at home.

The demand is for educational institutions to improve and develop a strong learning system using evidence-based and needs-based evidence to establish receptive and proactive measures. One evolving certainty because of the world health crisis is the movement to online learning modalities to mitigate the risk of face-to-face interaction.

The Department of Education (DepEd) should implement a long-term effect system in bringing quality education to the heart and minds of the learners while we are

in a hostile situation brought about by the pandemic. Teachers and Administrators need to be tough and discover new ways to adapt to the situation to continue the teaching and learning activities of children. The ongoing academic engagement has been a challenge for educators and pupils due to access and internet connectivity and the lack of funds to purchase gadgets that are needed to participate in an online class.

Reliable assessments have to be strengthened to guarantee the proficiencies are attained by the learners. In the process of altering the curriculum amidst the pandemic, it must be evoked that ingenuities and assessment tasks must be affixed on the learner's prerequisite including their safety and well-being.
