

IDEAL CLASSROOM SET UP

by:

Lorena A. Manuel

Teacher III, Bonifacio Camacho National High School, SDO-Abucay Annex

Think about thousands of wrists being clenched by smart watches that are connected to the fast wireless internet and obtained by several rooms with simple, straightforward designs. Think about hundreds of hands raised, holding the thoughts of a student, against a background of equipment of different uses, modernistic computers, and electronic devices. Think about a class whose rooms are quite suitable for every field of theirs. Think about it.

Consider it a benefit if it is appropriate for biological research, appropriate for technological operation, appropriate for solving quadratic equations and for graphing mathematical parabolas, as well as appropriate for all areas of learning. Gaining students of multiple intelligences having a goal of success and development.

It will be a higher ground for learners when a more enhanced and class-A advancement in their curriculums and atmosphere would be given to them. Offering a variety of skills and academical trainings.

Additional innovations in laboratories. Chemistry. Not just a branch of science concerning chemicals and substances, but also connection and attraction between the students and learning itself. Learners can get closer to their professions and jobs with the aid of these new beakers, thermometers, vanes, and syringes.

All these can be possible through the contribution and initiative of the government, implementation of the schools and intelligent criticism of the community for the

betterment of the society by affirming the mission of the Department of Education and having the quality we envision.
