

SCHOOL ADMIN'S PROBLEM-SOLVING TECHNIQUES

by:

Dennis V. Casabal, EdD.

Head Teacher III

Jose C. Payumo Jr. Memorial High School

When faced with organizational, interpersonal, or personal challenges, how should school leaders make decisions? How can future educational leaders' problem-solving abilities and perspectives change over the course of a year-long graduate course sequence that emphasizes school-level leadership and incorporates real-world scenarios? What is the best way to handle conflicts and other issues that may arise?

The way administrators handle organizational issues is one of the most challenging aspects of their jobs. They should consider the best ways to use simply to resolve problems. Perhaps the greatest solution is to solve mathematical and scientific problems the right way. The method used to develop solutions is the foundation for problem-solving techniques.

As a leader, you must ensure that problems are resolved immediately to prevent the escalation of new issues. Start with the request that requires a quick response if possible. However, you also need to think about your surroundings. Don't, in some ways, be a dictator. Try to enlist the aid of others by merely requesting their advice. Be open-minded and receptive to input at all times. More than one is two. Whenever an issue comes, try to ask for advice from others – not because you lack the ability to solve it, but so that you can make the best decisions possible about how to handle it.

An open communication with subordinates would bring an open partnership and build up a strong relationship.
