

TECHNOLOGICAL ADVANTAGES

by:

MARC KENNETH S. TOLENTINO

With the turn of the century, technology became the biggest trend in various fields like in work, in education and in industries. Technology paved the way for advancement and better outputs or results in the work of varied people in a certain organization.

Specifically, the technological advantages may be described into these:

First and foremost, technology paves the way for a faster work. Through the use of technology, the encoding of documents may be easily done. Moreover, the preparation and research of the materials needed in the job would be easily accessed. People in the office or in any kind of work who employ technology in their jobs may perform faster and better.

Secondly, it leads to innovation and creativity. With the utilization of the different software applications, people would certainly create something new and better. There are several features of technology that leads to the development and creation of innovative outputs that may be accomplished in work.

Thirdly, it accurately completes a task. With the absence of manual equipment and with the entrance of technology and modern gadgets, the work may be correctly done. Technology has systems and procedures to make things done accurately. In just a split second, a thing may be easily corrected to come up with an accurate data or information.

Fourth, it helps in quick communication. Technology connects people easily because the computer wires and systems operate to help achieve an immediate communication between and among people. The products of technology like mobile phones, laptop, desktops and among others are being used in communication.

Fifth, it increases outputs or results. Since technology connotes faster work, the production of more outputs or results is possible. The people in the workplace are able to accumulate more accomplishments in just a minimum of time.

Sixth, it boosts effectiveness. The use of technology may be found effective since its usefulness is evident. On the part of the employees, they become effective because technology aids them in doing their jobs very well.

Seventh, it shows no delay in action. There is quickness when technology is employed in the performance of the job. There will be no procrastination because as soon as technology is used quick action is realized.

Eighth, it yields convenience. Before the employees were used on manual equipment and materials in the fulfillment of their jobs but now things are getting better and convenient because technology is being practiced

These are the advantages of the utilization of technology in work and these may be instrumental to the organization's progress and success.
