

THERE IS ALWAYS MORE TO LEARN

by:

Joyner Kersey S. Bagtas
Teacher I, Bataan School of Fisheries

We first learned to think, walk, talk, and count in our homes. This is where we learned the essential skills. It's also where we first understand the morals that will make up our core. But that's not the end! We will know more when we leave the real world.

Everyone thinks of school as their second home. In elementary school, high school, and college, we learned about different subjects, honed our skills and talents, and learned more about ourselves, all of which will help us as we grow up in an institution that continues to shape us into the people we want to be. Still, getting your diploma, putting on your toga, and walking on stage are not the end of your learning journey, even if you have become what you set out to be.

Knowledge is everywhere, and it's free. It would help if you took advantage of this, because it will help shape your future. Teachers learn from their students at the same time that they teach them. Yes, it was a surprise, but students know things that teachers do not know about. The age difference between teachers and students can sometimes make it hard for them to talk to each other. What do we need to do? We break through the wall. It should now get in the way. We should be able to get past it and talk to them. By getting to know your students, you can interact better with them inside and outside the classroom. You not only got their attention, but you also learned how to follow the latest trends, which I don't think is a bad thing. It helps me be aware of what's happening around me, deal with it, and then use what I've learned. If you're behind, catch up, because it's never too late to learn something new. You can share information better if you've been through it yourself.

As a teacher, it's essential to learn from experience. You should, like a tree, continue to grow stronger and better off over time. Teachers guide the people who are the key to a better future. And for that to happen, learning needs to keep going like a river and never stop.
