

WHY STUDENTS SHOULD LOVE SCIENCE

by:

Alma D. Vilorio

Teacher II, Bonifacio Camacho National High School, SDO-Abucay Annex

Science is a promising subject. The unlimited potential that one student could discover make it more exciting and amazing. Students get to ask the question “why?” multiple times. They end up asking for more, continuously seeking answers.

Through Science it makes our lives better and richer using technology. The different discoveries made by scientists through research enabled us to do our jobs better. Science influences our personal decisions on health, transportation, energy conservation, communication economics and even in leisure activities. The achievements made through Science lightens our homes, our minds and even our computer screens. Like basically how you read this article through your computer screen and not on a printed paper.

Science is accessible even at an early age. It is for everyone no matter who you are, whether young or old, or wherever you come from. When you ask questions, more will spring from that until you reach an answer. It continues to feed your curiosity. Do you remember the smallpox vaccine which was introduced by Edward Jenner? It was the first successful vaccine developed in 1796 when he asked and observed why milkmaids were not contracting the smallpox disease (WHO 2016). That makes Science amazing. The questions could lead to answers that can create universal effects that could change our history.

Further, Science creates great ‘a-ha!’ moments through vast discoveries. It allows students to have fun while learning at the same time. Science topics like galaxies, comets, digestive system, reproductive system, clouds, gravity are much interesting and

entertaining. Sometimes, a simple science experiment can enlighten an important connection that we never even thought of, or we just took for granted.

The future rests on the shoulders of all Science teachers who can make history, change the lives of the students, and encourage them to love Science. Our main goal is to motivate them to become those genius scientists hungry for knowledge and exploration about the world around us.
