

TEACHER AND TECHNOLOGY FOR BETTER LEARNING

by:

FRANKLIN R. LOPEZ

Teacher III, Bamban Elementary School

Everyone needs to be digitally literate in the world we live in today since it is digital. Technologies benefit us in a variety of ways. Our lives are simplified by technology. Educators have generally acknowledged the role of technology in teaching. Students are aware of the importance of gaining these technology skills to prepare them for successful careers after they graduate from college.

Teachers are always trying to personalize learning for students. Technology can help them advance by providing access to longitudinal data, resources, real-time student data, apps, and more. Technology may help teachers introduce new teaching and learning approaches to the classroom with digital tools for formative and summative assessments and the development of blended learning environments.

We can see how crucial it is to our nation given the current pandemic. It was also referred to as the "silver lining of our education system" in a virtual round table discussion titled "Education During Trying Times" held in October 2020. The age of technology and digitization is upon us. The director of the SEAMEO secretariat, Dr. Ethel Agnes P. Valenzuela encouraged us to make the most of all of these technologies, be supportive to one another, so that we could find answers to the problems facing our education sector.

Through technology, teaching and quarantine are related. We can recall how the online education market in our country operated during the second quarter of 2020. Many LGUs gave children smartphones, trained instructors to improve digital learning, and added educational TV shows to our broadcast networks. The DepEd TV team originally

planned to produce 220 shows a week that would cover every topic by January 2021. Zoom is quickly replacing other online learning platforms not only in this country but also elsewhere. Smartphones have become a need rather than just a luxury. Digital technology is required right now.

It is a reminder to everyone who is part of the education sector to continue upskill and reskill so that we can contribute to our education system and improve the learning experiences of our learners.
