

THE JOURNEY OF EDUCATION

by:
Flora Danica D. Fajilan

Education gave us more than just learning. The more we are bound for learning the more we appreciate the beauty of life. The more we appreciate things the mature we are. Enhancing the capabilities of the human being to love education is not easy. Accepting things from the norms is not an easy Peary tasks. The reasons why the teachers must let the students appreciate the journey of education how painful it might seem.

These are the avenues to enhance the teaching and learning with the daily appreciation of the journey one has to travel.

1. Be appreciative first as yourself and love the part that you are included on the purpose of helping young ones achieve the development and academic growth. Let them see the nature and real side of education, let them feel the beauty of the education and help them increase their motivation towards works.

2. Develop more the capability training on accepting education. In the classroom, you can teach more than just the basics after all you are the leader of your classroom and you may enhance their imagination by giving activities which can modify their thinking and achieve creativity.

3. Instill the 21st century skills towards them. Installation of the 21st century skills is not easy, you yourself must be equipped with the knowledge and the skills this demands. The world needs teachers and leaders whom are bound with adaptation of skills and this is indeed essential and important in teaching them more than just the need-to-know basis, it is letting them flow their creative thoughts and validate this thoughts with the tangible output which they could give and get from other classmates.

4. Be sure to sustain the friendship and rapport amidst all these learning and teaching. Love your students as uniquely as they are and do not as much as possible break their trust as well as the stakeholders. Be cautious of what they need and what they would like to get as end-users of education.
