

## THE TEACHER, THE SEER

*by:*

**Aileen P. Endaya**

*Teacher I, Mabuco Elementary School*

Teachers are not just mere teachers.

Of all profession, teaching made a teacher a faculty of all fields of sciences and arts. Imagine how a teacher cultivates the mind with colors, sciences, numbers, and letters? Why is the teacher still the seer of the classroom?

In a K-12 curriculum, the system proposed that the office of the seer be given to the students. However, contradictory to the idea, not all classroom had seers in them. The teacher maintained the curriculum but must also deal with the loss. The teacher is always the seer but a humble one. They let the students work upon the flow of the lesson with subjectivity and objectivity. But at the end of the lesson, the teacher remains as he or she was.

Teachers are not studying higher degrees for them not to be called so. Well, they will not be called 'seers' literally, but their resume speaks that they attained the level of masters and doctors in the scholarly manner. These degrees cannot be compared on their students' of course. Thus, in dealing with the seer, the teacher provides the way, the students move the horse how fast or slow the ride to the course. The teacher teaches them how to properly deal with it.

The world has fast challenged the way teachers must act inside the classroom. There has been so many philosophies and ideas that are wild, humble, notable, seemingly nonsense, and whatever adjective one may say. However, in the history of education, and the history of teaching, every platform had its good and bad.

The better way to understand the teacher as a seer is to dig in his mind. What is inside the teachers' mind? No doubt, what is good for the students – lesson plans, daily lesson logs, motivation, strategies and many other means of dealing with day of tomorrow and within the week.

That is the mind of the teacher, the seer.
