

THE USE OF ELECTRONIC GADGETS IN EDUCATION

by:
Mary Ann C. Roxas

The world we live in today is changing, and these changes are happening all the time. If we were to look around, there are a lot of technologically powered objects all around us right now. Life was difficult before the modern era since everything had to be done by hand, including the simple tasks that took us a long time to complete. However, technology has now arrived, bringing with its technologies that have made our lives easier and are constantly raising our standard of living.

Just a few of the modern-day examples of technology-powered items include electronic devices. These devices are undoubtedly very helpful to us. Our lives have dramatically improved because of its convenience and effectiveness. Access to industries including education, healthcare, transportation, and industry has also been made easier. Smartphones, computers, smartwatches, and other electronic devices are the best examples of how they assist us in completing our tasks quickly and easily both within the home and outside as well. Technology is important in the educational sector, where it acts as a medium to help students learn more swiftly and easily. First off, it encourages autonomous study by enabling pupils to access their assignments and other school-related materials without the help of a teacher or parent by using a device that is linked to the internet. It is also helpful for teachers because they can utilize these devices to offer lessons and show movies and graphics that can spark interest in the class, making for an engaging and enjoyable learning environment.

Gadgets have drawbacks in addition to the benefits described above. These devices cause some kids to forget to finish their meals on time. Also, they use numerous devices

excessively, which prevents them from finding time for learning. They become addicted to these devices, which in some way makes them miserable.

Despite these drawbacks, we should be aware of the true reason why these devices were created: not to hurt us but to make our tasks easier and take less time to do. To prevent using such problem-causing electronic devices, all we need is discipline.

We must remember that it must be the source of our success, not our failure. Use these tools as much as possible to achieve your goals rather than your failures because they are extremely beneficial in the educational field.
