

## UNDERSTANDING THE STUDENTS' NEEDS

by:

**Rona D. Mole**

*Sisiman Elementary School*

It may seem apparent to a teacher to get to know the students, but how well do he/she actually know the kids who are seated in the classroom? Teacher may become a more successful and influential teacher if he/she puts in a little extra effort and time to get to know the students as individuals. It is crucial to delve a little deeper and learn about the students' learning interests and talents in addition to learning about their names, ages, friendship groups, and family histories.

It can be easier for the teacher to create a welcoming, polite, and accepting classroom climate if they are familiar with the students as individuals. This will not only assist to maintain the kids' high levels of engagement in the classroom, but it will also give them a place to turn to when facing challenging circumstances, giving them the confidence to open up and ask for help when they need it.

In order to utilize students' strengths and build on their advantages, teachers should also provide them the freedom to do so. Opportunities for confidence development, personal development, and success will rise with an asset-based approach and concentration. So that you can select and offer the learning resources best suited to each student, it is crucial to understand what the needs of your pupils are in this regard. As a result, everyone will have a much higher chance of learning something that is approachable, interesting, efficient, applicable, and remembered.

Teachers must possess or build the teaching capacity necessary to meet the needs stated by the students. Teachers should improve their skills, but this puts a heavy burden on them to provide the right methodology to do so. Given the time constraints of the

courses available, this task is made even more challenging. Additionally, it is crucial to take into account the opinions of the students. This is due to the fact that students put time, money, and effort into their education with the hope that it would be valuable.

To put it briefly, knowing your students' interests will enable you to give them engaging learning possibilities. Giving kids the chance to explore topics they are interested in, like the environment, will increase their likelihood of participating in the learning process.
