

## ON BEING A TLE TEACHER

*by:*

**Jenny G. Pascual**

*Teacher III, Bonifacio Camacho National High School*

For one to be a successful employee in the modern workforce, Technology and Livelihood Education or TLE is essential. A great method to increase a student's chances of career success is to select a career route and then educate them on the technologies and job-related skills associated with that field or industry.

In accordance with the education's vision and mission, the TLE Department seeks to foster in students a critical thinking, self-reliance, independence, sensitivity to cultural differences, and entrepreneurship through the development of their abilities in various technological applications and the practical application of life skills. This is how the TLE program works to strengthen students' value orientation and work-skills training. It exposes the student to a range of meaningful and developmentally appropriate activities. In connection, acquiring purchasing skills at an early age might be advantageous for pupils in TLE programs. Pupils may find these methods helpful in their day-to-day lives because of their real-world applications. At various educational levels, TLE serve various functions.

Considering this, students desire instructors who are qualified and who exhibit mastery of the subject matter they are teaching. The sum of a teacher's skills that are compatible with their finest teaching tool is their competency. It is important to take teachers' educational background and professional training into account when evaluating their competence and quality.

Furthermore, TLE teachers require continuous training to fulfill their obligations as youth molders. These skill-based trainings serve as the foundation and benchmark for

teaching students the knowledge they need to become better people. TLE teachers should not isolate themselves in this highly contemporary educational environment with their current skill sets. They should be able to refresh these trainings to close the knowledge gap between what pupils need and what teachers can impart.
