

PERSONAL PROTECTIVE EQUIPMENT

by:

Irish F. Bacolor, Ed. D

Teacher III, Jose C. Payumo Jr. Memorial High School

Personal protective equipment, sometimes known as PPE, is worn to lessen exposure to dangers that could cause serious workplace illnesses and injuries. These wounds and illnesses may be brought on by occupational exposure to chemical, radioactive, physical, electrical, mechanical, or other risks. Gloves, safety goggles, shoes, earplugs or muffs, hard helmets, respirators or coveralls, vests, and full body suits are a few examples of the items that make up personal protective equipment.

All personal protective equipment must be designed and built safely, and it must be kept in a hygienic and dependable manner. It should be snug enough to encourage worker use. Fit issues with personal protective equipment might mean the difference between being safely covered and being dangerously exposed. Employers are required to provide personal protective equipment to employees and oversee its correct use in situations where engineering, work practice, and administrative controls are impractical or insufficiently protective. Additionally, employers must provide training to all employees who must use PPE so that they are aware of the following:

Using PPEs can help you avoid needless industrial injuries, safeguard workers from excessive chemical exposure, and stop the spread of germs and infectious diseases like COVID-19. To increase worker productivity and efficiency and assist firms in complying with legal obligations (such as the recently expanded definition of limb workers under the Personal Protective Equipment at Work Regulations 1992). To avoid occupational injuries that are avoidable. To shield workers against overuse of chemicals. To stop the transmission of germs and infectious diseases, such as COVID-19. Improve staff

productivity and efficiency while also assisting firms in adhering to regulatory obligations (such as the recently expanded definition of limb workers under the Personal Protective Equipment at Work Regulations 1992).

As a result, we must abide by the government's guidelines and regulations regarding PPE use.
