

## CONDUCTIVE CLASSROOM FOR LEARNING

by:

**Jennifer P Tapat**

*Teacher II, Ipag Elementary School*

Learning environment serves as significant factor in the pupil's development. The teacher who's the manager of her own classroom, must rest assure that it is safe and conducive to learning. But how can this be attained?

Design and prefer well-ventilated classroom. Arrangement of cabinets, bookshelves, tables, chairs and desks must be done harmoniously so that pupils can move comfortably in all classroom activities. Design a neat, attractive and instructional classroom and bulletin display where in pupils find it inviting and engaging.

Design a child-centered seating arrangement which encourage class participation and group interaction. Consider their individual needs especially pupils with special needs or physical defects like nearsightedness, farsightedness and auditory defects. Seating arrangement may be change where pupils learned best and to fit classroom activities.

Teach pupils to be respectful. Demonstrate a sense respect to their peers as well as their facilitator of learning. Hence, learners will be stimulated to do their best, to develop their skills and innate capabilities despite of their weaknesses.

Plan a routinely approach where in time and effort are conserved at the same time order in the class is maintained while handling, distributing and collecting materials and equipment. Movements in the classroom like entering and leaving can be done orderly if pupils are instructed well and practiced every day.

Help pupils develop their interest and multiple intelligences by establishing a corner with variety of instructional materials like books, workbooks, and educational magazines, collection of stories, songs, poems, rhymes, verses and puzzles. Provide also manipulative tools, flashcards, flip cards which can be used during free time. Gather suggestions from the class in setting classroom rules and standards.
