INCORPORATING TECHNOLOGY IN THE CLASSROOM INSTRUCTIONS

by:
Hilda M. Lazarte
Teacher III, FC Del Rosario Integrated School

As technology becomes more and more part of our lives, we begin to see its benefits in the classroom as well. When used properly and purposefully, technology can truly transform the learning experience for both students and teachers. It is a useful tool for educators since it is flexible and has great potential to improve the teaching-learning condition in all schools. Technology, highlighting the modern trend of education empower teachers to present their students with the best, most up-to- date information in real time.

Teachers who embrace technology in the classroom have the power to improve learners success by further engaging students in their lessons, through adaptive learning, teachers use data to better understand student's needs in order to adjust techniques and personalize a student's learning experience. In addition to this, applying technology in teaching can be full of fun, appealing and provides interest to most of the students. The modern way of transferring learning to the learning environment enhances collaboration/ interaction between the mentor and the learners and results to a well improved learning outcome.

Nowadays, technology has also begun to change the roles of both students and teachers. It transforms education in so many ways…from making it easier for teachers to create instructional devices to enabling new ways for students to learn and work together.
