

MAKING SCIENCE CLASS INTERESTING AND ENGAGING

by:
Perly A. Agbing
Townsite Elementary School

Science is a subject that is vital for the growth and progress of humanity. Hence, most students do not find science to be an interesting or enjoyable subject. In fact, some even dread attending science classes. The reason behind this is that science classes are usually presented in a boring and monotonous manner, which does not engage students. However, making science an interesting and enjoyable subject is entirely possible with the right approach.

Here are some tips to make science an enjoyable and interesting subject:

1. Hands-On Experiments

One of the best ways to make science enjoyable is by conducting hands-on experiments. Students are much more likely to engage with the subject if they are allowed to participate in practical, hands-on activities. These experiments provide students with an opportunity to see science concepts in action and also allows them to ask questions and observe results.

2. Multimedia

Another way to make science an interesting subject is by incorporating multimedia into the classroom. Videos and other interactive tools can be used to demonstrate scientific concepts and give students a visual representation of what is being taught. This helps to engage students in the subject and make learning more enjoyable.

3. Field Trips

Field trips are another way to make science an interesting subject. Visiting local museums, science centers, and other science-related locations exposes students to real-life examples of scientific concepts. It also makes science come alive for students by allowing them to see and experience science concepts in action.

4. Relatable Topics

Science topics can be abstract and complicated. By relating science concepts to everyday life, students can better understand and appreciate the subject. Teachers can use modern examples, such as technology, to make science more relatable and interesting to students.

5. Student Choice

Allowing students to choose their own topics of interest in science class can increase their engagement and interest in the subject. By giving students the freedom to choose what they want to learn, they become invested in the subject and are more likely to participate in classroom discussions.

In general, making science an interesting and enjoyable subject is crucial to the success of students in the field. By incorporating hands-on experiments, multimedia, field trips, relatable topics, and student choice, teachers can make science more accessible and enjoyable for students. With the right approach, students can develop an appreciation for science that lasts a lifetime.
