

NOTIONS ON PERSONALIZED LEARNING

by:

Ma. Josefina D. Navarro

Master Teacher I, Gugo Elementary School

In order to make a difference, personalized learning is being adopted by a number of teachers in schools. Basically, personalized learning is the customization and variation of educational approaches and practices to make learning process better and appropriate for a specific learner, wherein unique style learning will be realized in accordance with the child's background, needs, and past experiences.

In this kind of learning, things happen in several places, with different activities, with various methods, and different time frames. Learners may get instructions from a teacher based on the particular needs which may vary from interactive online studying to dealing with different textbooks, as for the essentiality of the style.

There are several learning techniques that are prevalent in the field of education and all of those make every learning experience different and personalized to one another. Each kind has its strength and impact to different learners.

In the so-called personalized learning style, the child's personal experience, knowledge, and habits are related and relevant with learning approach to make learning faster, and to understand new ideas in order to easily improve one's academic achievement.

Personalized learning works on centering the task to a learner's prior knowledge, earned experiences, and inclined abilities so that the process would be more enjoyable, fruitful and meaningful.

One good example of personalized learning is when a teacher provides a learning resource material wherein the content, context, and approach are applicable to the learner. Let's say learning a language may be applicable on presenting a simple song that is relevant to the child's experience.

By means of using an approach to motivate a child and to correlate it to the learner's prior experiences and innate abilities, embracing the new information would be easier and better.

Young people learn a lot in personalized learning approach because their needs are met and their interests are motivated, to be able to cooperate well in studying thought-provoking and meaningful things.

The best way for a teacher to suffice a child's needs is to apply personalized learning for the delivery of knowledge is unique and acquisition of the new information is easy.

Certain types of material like video, text, or games, are incorporated in the realization of personalized learning wherein the learners are provided with appropriate learning styles.

Personalized learning customizes learning for it suits the presentation of the lesson on the student's strength, need, skill, and interest.
