

ADAPTING TO DIVERSE CHANGES IN EDUCATION; POST PANDEMIC REMEDIATION

by:
Mary Rosary M. David

How have you been lately? I hope you are coping after all the struggles we all have experienced after the surge of COVID-19. Why did I asked about you? Simple as, just like anyone of us, we all were aware especially those with students in their homes, that education in our country indeed have strived and was challenged enough while the surge of the virus spread across all the parts of the country. It was the main concern of the Department of Education to not apply educational freeze or the time to stop or set aside learning because of the virus. Hence forth the department decided to apply multiple and various modalities that will allow learning to push thru and still enable all learners to acquire quality education.

But the question of concerned stakeholders and others is that, will the quality be the same compared to an actual traditional way of learning inside the four corners of a classroom?

This question was whole heartedly answered and actioned by our Department of Education, enabling today of what we call NLC or the National Learning Camp. This project of remediation and development allows learners whom most have experience Learning Gaps during the pandemic. According to the studies that the department has conducted, we will need to further enrich our learners' cognitive abilities affected by the pandemic period and the gap has caused a 5-year need of remediation and coping to sustain what was lost or was not achieved during the COVID-19 surge.

As of this moment, the NLC or National Learning Camp is now being implemented and soon, hopefully will acquire a positive effect in enhancing the learners' needs and outcome.
