

“SCHOOL INFRASTRUCTURES: AN IMPORTANT FACTOR IN STUDENTS’ LEARNING”

by:

Theresa L. Manglicmot
Clerk, Orani National High School - Main

Along the quality education, a primary goal in achieving a country’s success, are the components that build the education system in its effectiveness and one of which is the school infrastructure. Different studies revealed that having access to a safe and convenient environment increases the capacity of a student to learn and have a positive academic performance.

In the Philippines, there are already 327,000 school buildings according to the elected Vice President and Secretary of the Department of Education, and only 104,000 of which are in good condition. With that, lacking of school buildings was raised as a primary concern in the upper hand that should be taken care of given that education is always one of the sectors that require much attention since then in the country.

With the current educational curriculum, K-12 program, one of the promises is to produce graduates who are employable even after graduating from Senior High School. And one thing to be considered is access to an environment suitable for molding quality leaders. To be able to do that, the government should invest more in exerting effort in school resources for the children.

Schools and other organizations already appealed about this issue several times in the past and even up to now, we are still on the same page facing similar problems in education. If we are to look at it closely, this can lead to the failure of students. It is a crisis in basic education and the government has the power to deem its situation by providing enough school buildings to cater to the need of an increasing number of learners.

There's no such thing as the right time to initiate the first step in solving this problem. Today is the perfect time to serve the children. Everyone deserves a safe place to learn. Only those who are in power can make this happen and the future depends on the students. Filipino people are known to be intelligent individuals and that won't change as long as there's free access to education and enough school resources will be given.
