"WELCOMING TECHNOLOGICAL ADVANCEMENT IN THE MODERN DAY FOR A GREATER IMPACT IN EDUCATIONAL INSTITUTIONS"

by:
Theresa L. Manglicmot
Clerk, Orani National High School - Main

We are now in an era in which technology takes a huge role in everyone's life. It also seems most of us already embraced the fact that one can't live without it, especially in the current situation wherein gadgets like smartphones appear to become a necessity. As we all know, everything we do in the past was done manually. Unlike now, with the help of technology, jobs and other errands become easier and less time-consuming.

In educational institutions, technological applications are very much needed. Especially now that we are into modernization, technology can help educators and learners to have a more intensive and effective interaction inside and outside school premises. One good example that makes learning faster and more effective is the existence and growth of the internet. It is very much useful given that it contains most of the information needed in doing research and innovations.

"Techy," is a word that best describes today's learners. They seem to know a lot of things about technology. They can now invent robots with the use of programming. Connections are now way easier because of modern platforms such as Facebook, Messenger, Instagram, and Twitter. Surely, we are all aware of how the educational set-up changed in recent years—from face to face into online set-up. And with the help of these platforms, access to education became convenient.

It also helped in terms of globalization because of the useful conferences online that are offered to students which serve as an additional experience and knowledge for

them in exploring the world of technology. There are opportunities abroad and with the use of the internet, they can also engage in international competitions which is a good stepping stone in preparation for their jobs as they graduated.

Technology is undeniably a useful tool in every field that we can think of. It does not only increase the level of the country's economy, but also the capacity of schools, colleges, and universities toward greater opportunities. There could've been disadvantages but we cannot overlook the impact of having the advantages as we start to make use of it.
