

## FUN IN THE ROOM

by:

**Lovely Renz M. Garcia**

*Administrative Aide I / Pulo Integrated School*

In the olden days, pupils are accustomed to traditional method of learning. They got used to the usual blackboard and chalk approach. They are well-trained in paper and pencil test. As time goes by, however, the method of learning has evolved into more fun and more exciting ways.

To garner pupils' attention and participation, here are some fun activities to try.

### ORIGAMI

This is the art of paper folding. It originated in Japan and can be used in different areas of learning. Although originally, it was utilized for arts and crafts but it evolved into being developed to aid in geometry, architecture and robotics as well.

### CLASSROOM THEATRE

This activity can be used as performance task. It is a form of simulation that lets pupils unleash their inner Thespian skills. It helps pupils develop their creativity and ingenuity.

### CREATIVE STORYTELLING

Storytelling has progressed from reading aloud straight from the book and memorizing and re-telling, to the more fun ways like puppet storytelling, using dioramas and live dramatization during the session. Furthermore, the rise of modern technology paved way to digital storytelling. All of these were used to develop pupils' oral communication.

### USING DOUGH FOR ARTS AND SCULPTURES

Clay and dough are used for sculptures. While clay is used by those who have higher knowledge on sculptures, dough is often used by learners in primary level. Dough is used to practice psychomotor skills of pupils. Some use dough arts are solely for arts and crafts, others apply for arts and home economics as well. How? They simply make their dough arts edible. Amazing, right?

## BINGO using MATH

While BINGO alone is already a popular game, applying in on MATH makes it more fun and exciting. Integrating it with the lessons, the four basic operations can be used in this game. Areas like Addition Multiplication can be enhanced through it. At the same time, pupils are enjoying.

Learning is fun and enjoyable. It is not meant to be boring. We just have to choose interactive activities which will garner their attention and participation
