

THE BENEFITS OF EDUCATIONAL RESEARCH FOR SOCIAL STUDIES TEACHERS

by:

John Dean G. Regondola

Teacher III, Pablo Roman National High School

Educational Research is a systematic method to find new knowledge. It is a type of study and investigation that aims to gather and gain new ideas and knowledge about social and environmental issues. It is also a study whose main task is to gather new ideas or facts. It is usually done by students, professionals, or anyone who has the desire to discover things that will allow them to better understand the environment and society they live in.

Educational Research is a systematic, controlled, empirical, and critical investigation of natural events or phenomena based on theories and hypotheses based on appropriate relationships with events and phenomena.

Educational research uses collective and gathered data from research scientific methods and tools that can provide a definitive answer about the best teaching practices. The purpose of educational research is also to develop new knowledge about the teaching and learning situation to improve educational practices.

It is a systematic, objective, and comprehensive investigation that the research of events or occurrences requires proper gathering, recording, and critical analysis and interpretation of all information and facts about natural events or phenomena.

One of the main goals of the research is to apply the scientific method to the task of discovering meaningful answers to questions. Because of educational research, we will know the truth. This method is considered scientific because it follows steps that are systematic, accurate, orderly, and have a meaningful destination.

In other words, said research is focused on the development and advancement of knowledge.

Conducting said research reflects the state of knowledge and thinking, with the ability to express and share knowledge. That is why the authority of research in knowledge development is outstanding because any new ideas that come from it are expected to be shared. Here, research is considered a public work, made public for others to study. In this way, it can be seen whether the knowledge proven by research is acceptable or not.

Research is useful if one seeks to improve, improve the quality of life and find a possible solution to problems. The researcher must be patient, careful, systematic, and critical study about things, events, events, concepts, practices, problems, processes, issues, or cultural and social aspects.
