

TEACHING MADE EASY WITH TECHNOLOGY

by:

Giselle Mae Anne B. Manalo

Teacher II, Calungusan Elementary School

Nowadays, technology is the swiftest and simplest way to acquire knowledge as we continue to new forms of living. It has certainly made major contributions in boosting the country's economy and assisted mankind to live in a more comfortable and affluent manner. Relating to education, the technological leaning of the system renders it competitive at an international level and provides the required educational tools needed to meet its aspiration of developing lifelong students and helping construct the nation, as outlined in DepEd's mission and vision.

Despite the potential benefits, using technology carries a certain amount of risk that parents and educators must be aware of. Mobile applications can provide an unwelcome burden on learning, especially if used excessively. Online games, Facebook and other social media can have detrimental effects on a child's intellectual growth as well as their psychosocial development, potentially leading to behavioral issues.

Considering this, the correct selection of teaching and learning materials, alongside development of available resources from various websites, will prove beneficial to learners. This is due to proper implementation and instruction during the teaching/learning process. By exposing the students to these accessible materials, it will be easier for them to gain value knowledge and shape good behavior necessary for becoming successful individuals.

As a teacher, it is necessary to take into account the author's intention and other characteristics of resources that could shape the behavior and understanding of students. Furthermore, what they learn will influence how they act in various environments. For these reasons, careful planning and selection of learning materials are pivotal for successful teaching and learning. Evaluating different applications and tools is a vital part of this process, as proper selection should be made to ensure its integration into the learning process runs smoothly; making it easier for teachers if data is readily available.
