

EPP: A BRIDGE TO SKILLS ENHANCEMENT

by:

Ma. Liza Q. Tuazon

Teacher III, Alauli Elementary School

If you give a man a fish, you can feed him for a day; if you teach him to fish, you can feed him for all time.

The latter quote encapsulates the fundamental tenet of education provided by "Edukasyon Pantahanan at Pangkabuhayan" (EPP). A man cannot survive by relying solely on the support of those around him. It is a truth that in order to thrive in this ever-evolving world, we must equip ourselves with practical skills. As the old saying suggests, EPP appears to be a useful subject that students should never take for granted.

Our journey towards complete personal improvement is strengthened by the many activities we learn from EPP. EPP fosters the development of technical skills in industrial arts, home economics, entrepreneurship, and agri-fishery. The aforementioned fields are crucial competencies that can equip us against this ignorant and lazy environment. They will act as our links to a more promising future and means of subsistence.

Looking back, EPP is the link to knowledge that can sustain us. For instance, we can be motivated in optional ways by home economics. He does, after all, teach us how to wrap presents using materials that may be recycled. Thus, this is a useful tool that encourages kids to be more creative. Afterwards, such inventiveness will become ingrained in the minds of the kids and will not go away.

Because it instills precious qualities like compassion and everlasting concern for nature, sustainable agriculture in agricultural technology challenges students' ingenuity to the utmost.

Our minds can be opened to independence, creativity, and responsibility through industrial arts. Additionally, as we are learning a variety of talents like electronics, metalworking, drafting, civil technology, and others, which will all provide us a secure understanding in terms of livelihood, this will benefit us in the future.

We will have several opportunities to use our business and information technology (IT) skills as a result of becoming entrepreneurs.

As the hope for the future of our fatherland, EPP represents a breakthrough in our lives. We should cross this topic as we get ready to serve as valuable members of our nation's citizenry. The abilities it imparts will help us navigate difficult situations and provide food for the entire nation for all time. Thus, it is wonderful to state that EPP is a bridge that leads to both skill development and a better future.
