

INVOLVEMENT OF PARENTS IN STUDENT'S ACADEMIC PERFORMANCE

by:

Louise Anne S. Labarentos

Teacher I, Daang Bago Elementary School

Parental involvement in school has been proven to be a critical component of children's academic outcomes. Early learning outcomes can be significantly impacted by family involvement in education, both within the classroom and across the school. Strong ties between teachers and families allow them to establish their norms and expectations at home while also supporting the lessons that students are learning in the classroom. Children are greatly influenced by their parents. They have a more direct impact than friends, teachers, and the media combined.

Students' academic success can be significantly impacted by parental participation. Empirical evidence consistently indicates that parental involvement in their children's education can lead to better academic results. Educators must keep in mind that every family is unique. Always assume that families are willing to help their children in any manner they can, even when they may encounter obstacles to their involvement, such as schedule conflicts or needs for transportation. Because of this, a parent's encouragement and support for their kids' education is very important. It can encourage and enable the child to form positive study habits. Academic success is the outcome of this. Over time, the students gain social and economic advantages. To have a significant impact on a student's performance, the amount of involvement is important. The influence on a child's academic success increases with the level of parental participation. A key aspect of parental involvement is the creation of a positive and supportive home environment. Parents can foster a love for learning by emphasizing the importance of education and

providing a space conducive to studying. Establishing routines for homework and study time helps instill discipline and consistency in a child's academic habits.

Students may experience stress due to academic obstacles, and parents can offer vital emotional support during these trying times. Resilience and an optimistic outlook on learning are fostered by praising effort and advancement, recognizing successes, and providing encouragement. To stay up to date on a child's development, parents and teachers must communicate often. Parent-teacher conferences, emails, and other correspondence provide parents insight into their child's areas of strength and potential growth. Parents can take proactive measures to resolve issues by keeping an eye on their children's homework, grades, and overall academic performance. Parents are the children's first teachers, therefore setting an example of lifelong learning through modeling sends a strong message. Showing an interest in education, self-improvement, and personal growth helps kids see learning as a continual process rather than a one-time event.

To sum up, parental participation is essential for academic achievement. Parents who actively engage in their children's education help them grow into well-rounded people who possess the necessary life skills in addition to being academically successful. Together, parents, educators, and students build a supportive learning environment that prepares children for lifelong learning and success.
