

IMPORTANCE OF AUDIO-VISUAL DEVICES IN LEARNING

by:

Teodora T. Quezon

Teacher III, Bilolo Elementary School

Audio-visual or AV brings together sound, visual and interactive media elements designed to motivate, inform and convince the audience. Audio-visual devices are a combination of seeing and hearing. They play a vital role in teaching-learning environment.

Audio-visual devices facilitate interactive learning opportunities by combining visual and auditory components. By applying AVD enable us to explain lessons and ideas more clearly, engagingly, and with greater emphasis. Audio-visual devices help convey information in a profound, dynamic and engaging manner. They motivate children to learn by capturing attention in a more significant way.

Audio-visual devices are irreplaceable tools for improved retention and reinforcement. ADVs improve children retention by enhancing captivating learning experiences. They help teachers to present complex ideas in a more interactive and easily understandable way. Visual aids like videos generate various senses, leading to increased comprehension, concept retention, and learning engagement.
