

TEACHING STRATEGIES FOR DIFFERENT TYPES OF LEARNERS

by:

Teodora T. Quezon

Teacher III, Bilolo Elementary School

There are four types of learners in education environment namely: visual, auditory, reading/writing and kinesthetic learners.

It's important to be familiar with the different types of learners to apply variety of ways that fit their individual needs. When the teachers are familiar with their characteristics, they would be able to address the appropriate learning styles and instruction requirements suited to individual learners' needs.

Below are different types of learners and the corresponding strategies that fit them:

1. Visual Learners- They prefer to learn facts using charts, maps, diagrams and other forms of graphic materials. They learn the concepts using images. They gain information when they visualized relationships and ideas.

2. Auditory Learners- They learn by hearing and listening. They comprehend and remember things they have heard. They do not like lengthy narrations and explanations
