

TECHNOLOGY'S IMPACT ON EDUCATION

by:

Elvie R. Mendoza

Teacher III, Saysain Elementary School

Technology plays a vital part in our lives. Technology helps explore the world in a many twinkles. It has a major impact on education. A technology gap presently exists in seminaries then in the Philippines that's precluding pupils from enjoying the advantages handed by technology in the classroom. The kind of living and the profitable status of our country are the main reasons why maturity of our people are having difficulty when it comes to technology.

Numerous have said that technology is a salutary supplement to the education system. Lim (2021) stressed that Learning should be able to enjoy both gaining new knowledge and new abilities, which are two extremely important components of life. Learners can enhance their knowledge and skills by participating in a range of online programs made possible by educational technology. Students can learn about a wide range of fascinating topics in these courses that are relevant to their chosen careers or fields of study. The scholars using tablet apps performed more than the bones without these apps. Technology has a positive impact on education. With so numerous advantages. Philippines is looking to increase the use of technology for perfecting education despite the challenges that might come along the way.

Tenorio (2021) asserts that since today's students are accustomed to using technology, it is critical to give them flexible tools and resources to enhance the caliber of the teaching and learning process. These tools have the power to strengthen the bonds between learners and teachers, foster student collaboration, and develop time management habits. The Philippines as a country would profit greatly from furnishing

further of its scholars with high- tech literacy tools. Without the proper coffers, students in these lower- income areas won't admit the same educational support as scholars' fortunate enough to come from advanced- income regions. The government will play a big part in furnishing support to those are less-privileged when it comes to these matters.

Internet indeed it's relatively slow in our country, it's getting more accessible. As internet access becomes more available, more scholars will have a chance at a quality education. With the right class, honest and effective administration and devoted preceptors, a world class learners will be moldered.

We pictured that every child in every academy has an equal occasion for success anyhow of their status in life. We all aim to make this dream a reality especially for our learners. For numerous of us who calculate on technology daily on academy and work, it's delicate to imagine any part of our lives without internet access and bias. Technological advances haven't only made our lives more accessible, but they've allowed those of us with access to these technologies to make great strides in education. We believe that every child should have the capability to take advantage of these advances. However, numerous kind- hearted individualities and groups who are willing to extend their help for those who are less fortunate in terms of access in technological advances, If not.
