

TEACHER'S RESPONSIBILITY TO EDUCATIONAL SUCCESS

by:

Norilyn S. Gonzales

Teacher III, Banawang Elementary School

Teachers play a vital role in every student's life. They develop each child's learning capacity, help them acquire knowledge, and help them achieve their full potential; with this, a combination of various teaching strategies, methods, and techniques help educators identify and establish their teaching and learning objective. It will help them develop and maximize the teaching strategies that work. Aside from these, providing a positive attitude provides a positive impact to students' confidence and self-esteem inside and outside the classroom. This means that not only the teaching techniques, but, also the learning environment of the learners contribute to their overall performance (Munna, and Kalam, 2021).

A teacher must be prepared with her everyday lessons and should grasp the learning area well. This will help them to properly impart knowledge, provide a clear lesson, and help the class participate and understand well each topic. Before acquiring different teaching skills, an educator must prepare and review her lesson plan, so she can identify which subject matter needs to elaborate on and provide longer explanations to students. Having a wider understanding of a subject matter prepares them for the next lesson. It also helps them generate new ideas, condition their minds, identify which teaching technique to apply, and practice a presentation that will make their lesson engaging and participative (Yildiz, 2021)

One of the most effective strategies to boost learners good quality performance, a visual teaching technique has been proven to increase learners' learning capability. An effective use of teaching and learning materials has been seen to be a major factor in

helping teachers share information and facilitate a class. A visual teaching technique has helped students understand better. Therefore, it is highly suggested that teachers maximize this teaching and learning technique to encourage the students to participate more and perform well (Himah and Gyamf, 2022).

Teaching a room full of learners seems impossible to achieve. With the development of new technologies and trends, children became less focused at school which makes teaching more challenging for teachers. Educators need to maximize their teaching skills in order to conquer these challenges to help learners achieve educational success.
