

NURTURING LEARNERS IN THE NEW ERA OF EDUCATION

by:

Joesel D. Vergara

Teacher II, Almacén Elementary School

“Education is the most powerful weapon,” this famous quote by Nelson Mandela enlightened us to the core importance of education in an individual’s journey toward success and the achievement of their aspirations. Education is undoubtedly considered one of the most valuable possessions that no one can take away from an individual. It is the duty of the teachers to make these adjustments in order to ensure that learners are exposed to the most effective and interesting ways of teaching.

Today’s education is focused on the students and also involves activities that challenge the students’ inventive skills in teaching. Teachers should adopt current ways of presenting Content and ensure that the settings are appealing and supportive for the students. Learning by computer and other hands-on approaches helps the teachers to improve the active participation of the students in the lesson, students understanding and their critical thinking.

In order for the present-day teachers to be effective, they are expected to understand the various new technologies and know how to incorporate them in their teaching. This will give the learners a much better experience in the learning process than in the previous years.

The transition to a more contemporary framework of education characterized by the use of more images rather than words would greatly improve the efficiency of a classroom setting. In this way, using images and other multimedia aspects, the tutor helps students with different learning preferences and helps them grasp difficult subjects much better.

When both teachers and learners have an open mind to the new ways of education, the results are impressive. Teachers can use more modernized means of teaching and a more active approach to learners and save the learning process for their students in a more effective and efficient way.
