

## TEACHING INVOLVES SHARING EXPERIENCES BETWEEN THE TEACHER AND THE LEARNER

*by:*

**Jomar C. Rubio**

*Teacher III, Sibul Elementary School*

Sharing stories is an important part of teaching because it keeps things interesting. This interaction is significant for helping kids improve in school and creating a good learning place (Ohayon, 2022). Professional Learning Communities (PLCs) and other collaborative learning models let teachers share their knowledge, develop new ways to teach, and work together to solve problems affecting student progress (Nagar et al., 2019). Teachers and students working together can better determine what each student needs and ensure they get the best education possible (Chow, 2022). Innovative and student-centered learning approaches can only be used if teachers work together well, which will eventually help students learn (Jaya, 2023).

Collaboration is one of the most important ways to improve school teaching and learning. According to social constructivist views, working with others is important for helping students learn and for teachers when making plans (Satterfield, 2019). Studies have shown that when teachers work together, primarily through teacher leadership programs, they can develop new ways to solve problems and use effective teaching methods (Pardini et al., 2022). Also, having student leaders in the teaching process can significantly affect how well students learn, which shows how important it is for students and teachers to work together (Shonubi, 2022).

Flexible teaching methods, like the flipped classroom method, encourage working together and putting the focus on the students, which is in line with social constructivist ideas (Noguera et al., 2022). Hypnoteaching and other new ways of teaching have helped students improve their speaking skills and classroom control, which shows how

important it is to try out diverse ways of teaching (Rahmaniah & Rohman, 2020). According to Lawrence (2023), using AI tools in the classroom can also help teachers set up collaborative learning situations and move students from one-on-one to group learning settings.

Positive partnerships between parents and teachers have been shown to significantly affect kids' academic progress, so collaboration only happens in the classroom. When ESL and topic teachers work together, they can improve their skills and give ESL students more chances to do well in school (Giles & Yazan, 2020). Teachers can also help students improve their teamwork skills and learn more using collaborative learning methods (Mujahid, 2022).

Teachers and students share their stories in many ways when they teach. Collaborative learning models, partnerships between teachers and students, and new ways of teaching make for a rich learning setting that helps students do well. By working together, teachers can improve their methods, get students more involved, and help them learn more. It is important to keep researching and using collaborative methods to improve education and meet the needs of all students in the 21st century.
