

## APPLICATION OF MULTIPLE INTELLIGENCES IN TEACHING

by:

**Lorena R. Tarrayo**

*Teacher III, Pablo Roman National High School, Senior High School*

The concept of Multiple Intelligences may be considered as one of the most creative contributions to the field of education. Through this, the teacher as well as the students' creativity may be manifested in the class setting.

Presenting varying activities. Several activities may be presented before the class using the Multiple Intelligences theory. It may consist of activities dealing with music, arts, science, mathematics, language, dealing with people, personal reflection, nature, body, and even thinking.

Inspiring collaboration. The activities using the Multiple Intelligences theory may inspire the students to pool their ideas and efforts together as indications of collaboration. This means that the said theory requires people to discuss and come up with a good output.

Utilizing visuals and other resources. The good thing in Multiple Intelligences theory is that it makes use of visuals and material resources. Concrete objects are being used for learning. These things are representations of various objects which are seen in the universe.

Introducing music and dances. The most enjoyable parts in the application of Multiple Intelligences theory are the music and dances being performed in the class. The students are expected to sing and dance being the culmination of the lessons related to arts.

Encouraging reflection and self-awareness. There are times when the students need to self-reflect and be aware of oneself. Through the theory of Multiple Intelligences, they are able to write and think about themselves as self-assessment.

Associating learning with nature. Students are able to appreciate, protect, and love nature, through the theory of Multiple Intelligences. This entails the study of the environment, flora, and fauna.

The concept on Multiple intelligences may be considered as relevant and timeless for it may always touch the different abilities of the students in school.
