

**“PROFESSIONAL GROWTH AND DEVELOPMENT FOR TEACHERS
TOWARD A HIGH-QUALITY EDUCATION”**

by:

Wilmond M. Isip

Teacher I, Bangal Elementary School

In education, the term professional development may use in reference to a wide variety of specialized training, formal education, or advanced professional learning intended to help administrators, teachers, and other educators enhance their professional competencies, and effectiveness. When the term is used in education contexts without qualification, specific examples, or added explanation, however, it may not be easy to determine precisely what “professional development” is.

Since We are now crossing in the modern era or the 21st Century, our educational system also in the same process where in, it involves more utilization of advanced technologies for better teaching and learning. And because of that We teachers shall also upgrade our skills to provide a high-quality education for our modern Era learners. It is very significant that a teacher must upgrade into high level skills and ability that will serve as an important role in the teaching world specifically when We are dealing to the advancement of modern technologies for quality education. That’s why there are some comparisons between traditional teachers and modern teachers that makes very important topic to discuss with.

Teaching and Learning is a continuous process that will makes Professional development which seems to be important for the learners to have better learning outcomes, for us teachers that We will learn a better way to teach, and also will develop a much better organization and planning skills in our nation to gain more significant knowledge and industry insight that may continue our education through which

professional development gives us an opportunity to step out in our basic education since We are now adapting the educational system of the new Deped Matatag Curriculum.

Modernization in our nation has really affected the core of our lives, including our way of communication, collaboration to learn, and most especially our way of teaching in our school. As an educator We should professionally develop our skills, 21st century teacher must have a learner-centered classroom and personalized instruction, have learners as a producer, should learn how to adapt new technologies, must go global, go digital, collaborate, connect, should innovate and keep learning. Being professionally developed, teachers nowadays specifically in public schools, We are attending LAC sessions and seminar provided by DepEd and other government organizations to be updated and offer a quality education. Educational sectors provide trainings and seminars for teachers to enhance their skills and develop them professionally.

For me, the teaching profession contributes more to the future of our society than any other profession, As a teacher We have the ability to rebuild the nation for our learners through the continuous EFFORT and STRUGGLE, same as the continuous Growth and Strength of our education system will easily take its place not only for us teachers, but also for our future builder of the nation.
